

With the acquisition of Officina Meccanica Montorfano Sas the BLM GROUP now adds high-tech wire and tube bending systems to its production range

A more **complete** range

With the acquisition of Officina Meccanica Montorfano Sas Cantù (CO), a company specialised in the manufacture of patented double-head wire and tube bending systems, BLM SPA broadens its range of technological systems even further.

As of 13 January 2009 all the design, produc-

tion, sales and technical personnel has been incorporated in the BLM SPA headquarters at Cantù.

Full-speed ahead!!

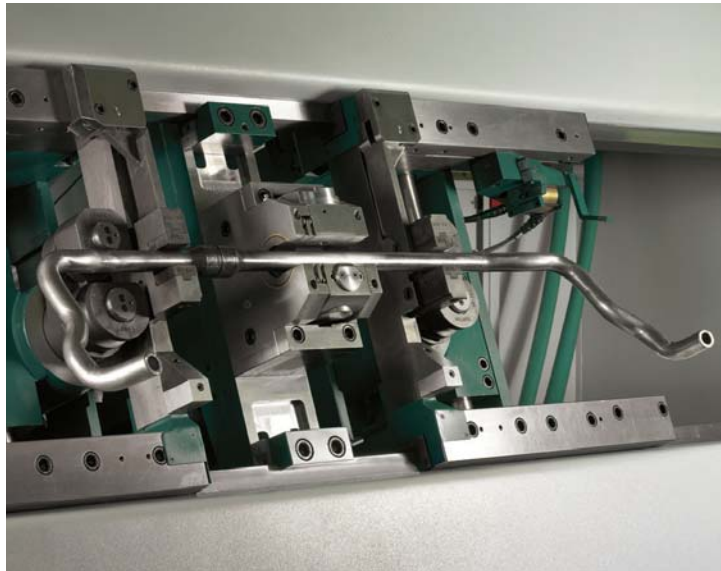

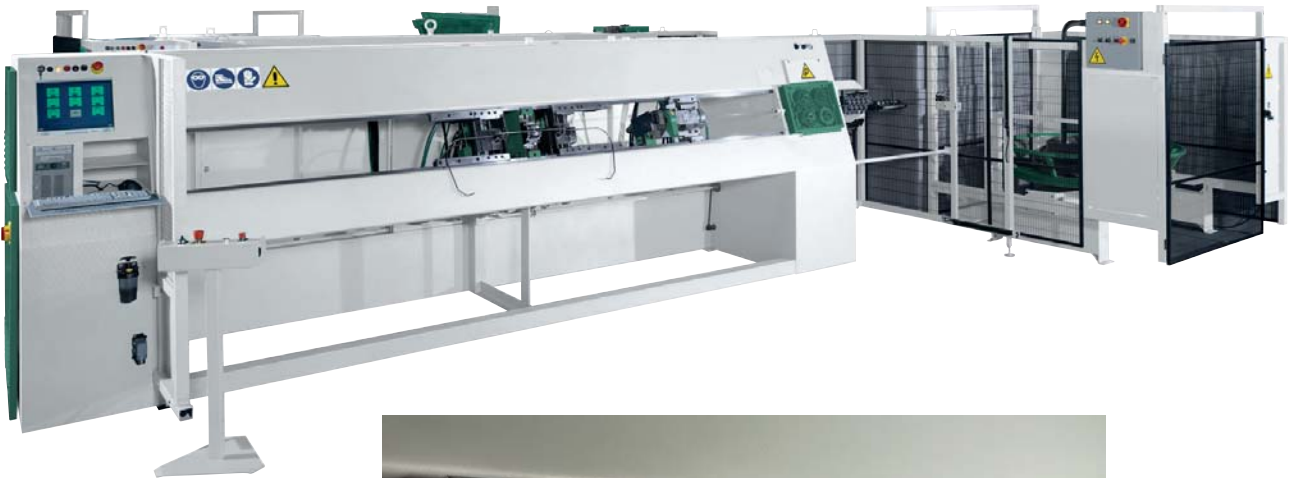

Officina Meccanica Montorfano Sas has been in the business for over 40 years and is a completion to the range of high-tech tube bending systems with its high-production bending solutions for wire, bar, flat sections and for reinforced electrical heaters.

The patented double-head automatic bending machines of the DH2000 series double the productivity and complete complex processes on wire and/or tube from precut bars or coils in a single cycle without any need for setup or adjustments.

The advantages are many, but to name but a few:

- High productivity thanks to the bending operation of the two heads at the same time
- Left-hand/right-hand and variable radius bending on the same head using the same tool
- Central locking of the piece to make closed and/or folded shapes and better control of piece deflection
- Bending of twin pieces with automatic cutting to separate them after being bent
- Suitable for pieces with prewelded or flexible parts and for bending reinforced electrical heaters

The main applications of the wire bending machines are:

| | |
|------------------------------|--|
| Automotive | Seating components, brake - wiper - steering column tubes even preassembled with hose, jack lever reinforcements, torsion and anti-break-in bars |
| Domestic appliances | Wire racks and grids for ovens, dishwashers, refrigerators and gas hobs, tubular serpentine, reinforced electrical heaters |
| Internal-external furnishing | Bathroom fittings, wire and tube chairs, kitchen components and accessories |
| Shop equipment | Trolleys, baskets and display stands |
| Industrial building | Bar structures, reinforced concrete bars, structural grids, industrial heaters |
| Hospital equipment | Bed components and healthcare equipment, drip stand |
| Children and toys | Pushchair and pram frames and frames for toys, such as handles, pedals, etc. |
